

# TX6™ 10GIG™ UTP Copper Cabling System

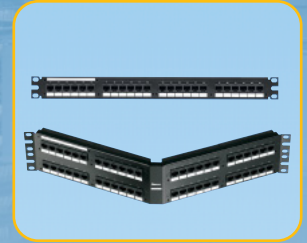

TX6™ 10GIG™  
Jack Modules

TX6™ 10GIG™  
UTP Copper Cable

TX6™ 10GIG™  
Patch Cords

DP6™ 10GIG™  
Patch Panels

## *The synergistic combination of components yields best-in-class performance.*

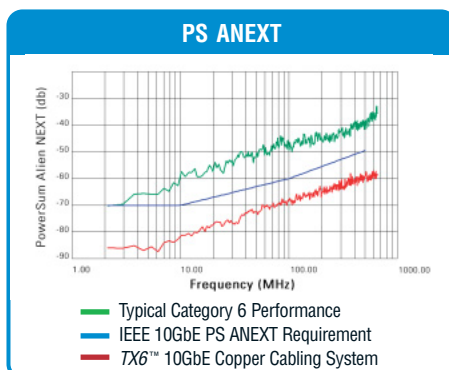

This 10 Gigabit Ethernet end-to-end solution provides certified performance in a 4-conductor channel up to 100 meters and exceeds the requirements of TIA/EIA 568B.2AD10, ISO 11801 Class E Ed. 2.1 and IEEE 802.3an-2006 standard for supporting 10GBASE-T transmission. The modular, scalable copper cabling system delivers a cost effective media for high-bandwidth data center, workstation and web-enabling applications of today and tomorrow.

The TX6™ 10GIG™ UTP Copper Cabling System is a synergistic combination of components, not just a new cable. Each component features innovative complementary design technologies which work together to suppress alien NEXT, while providing Class E/Augmented Category 6 electrical performance beyond 500MHz.

- TX6™ 10GIG™ Jack Modules
- TX6™ 10GIG™ UTP Copper Cable
- TX6™ 10GIG™ Patch Cords
- DP6™ 10GIG™ Patch Panels
- GP6™ PLUS Punchdown System

Finally, a true 10 Gigabit Ethernet solution that delivers certified performance so you can specify with confidence a system that meets the demanding network requirements of today and tomorrow.

## **Passing Alien NEXT = 100m 10GbE**

PS ANEXT is a key factor in achieving 10GbE performance in a cable bundle. TX6™ 10GIG™ UTP Copper Cabling System exceeds the Powersum Alien NEXT requirements for 10GbE performance over 100 meters.
